

HIGHWAY STATISTICS

2011 Delaware University Mileage

For year 2011, The Office of Information Technology (OIT) of the Delaware Department of Transportation (DelDOT) reported the mileage of the University of Delaware and Delaware State University. At present, we do not maintain GIS data for universities which is now required for submission to the HPMS coordinator but will endeavor to collect and maintain the mileage of universities in the future based on the availability of budgets and GIS resources.

The reported mileage is based on 2010 aerial photography, DelDOT's existing road network, and linear referencing system (LRS). The GIS file was created by the GIS Administrator, Mike Del Tufo from the GIS section of OIT. The mileage was determined by conflating the aerial imagery over the road network and digitizing the roads as part of the road network. The new roads were then given mile points through a database process using DelDOT's linear referencing system for assigning mile points as its basis. This is the first attempt in providing the information and may need further review of the roads identified for accuracy by the university campuses.

GIS resources were used to extract 14.07 mile of public roads.
